JNLewis Design Portfolio Planning Document

Overall Concept

The overall design and concept of my portfolio site will be a clean minimalistic one-page scrolling responsive design with a simple header at the top with a logo and a simple navigation bar. There will be a graphic with a welcoming section. The following section with be an about me section with a bit more about myself. The last section with include 5 projects and a simple footer at the bottle with contact information and the logo. The design will showcase my work as well my abilities to help sale my skills to future employers.

Technology and Build

Before I start my build I will make sure I have all my content and graphics ready to go. I would like to start from the header and work my way down in my build as I feel it makes themes logical approach and will help keep me on task with the overall built. My approach to the build will be to get the framework and content of the site in place first then add the CSS and JavaScript to style that will add the polished look. I will use bootstrap to create a responsive site.

Personal Statement

Creativity has always enticed me. My name is Jamie Lewis; designing and coding have always been symbiotic to me. The artistic aspect of coding is something I truly enjoy. I am interested in frontend development where I can utilize my skills freelance, or within a company. My academic journey to strengthen my coding abilities began at Seattle University which gave me the tools I would need to make my visual designs come to life.

Projects

1. [Embedded Media](#) from Wats 1010: This project was embedding the Monka video and overall I think it has a nice design presence and will be good for showcasing for the portfolio. It does need to be polished though.

2. [Product Page](#) from Wats 1010: This was the final project for Wats 1010 and needs to be polished but helps bring together all the elements learned in Html and CSS.

3. [Star Wars](#) from Wats 4000: This was from Web app but it shows some diversity and could be helpful in show casing other skills. I want to polish the finishes and work on more functionality from the API call.

4. Canon 1D Mark II from Wats 3020: This was a project from Intro to JavaScript. I think this also show some good skills and lets to show progress since being in the program. I would like to polish the overall site and add some more functionally in with JS.

5. Capstone Project from Wats 4030: Yet to be decided but will be the highlight and show the progress made within the program and be able to show the ability and skill.

Third Party Profiles

There will be 3 third party profiles listed.
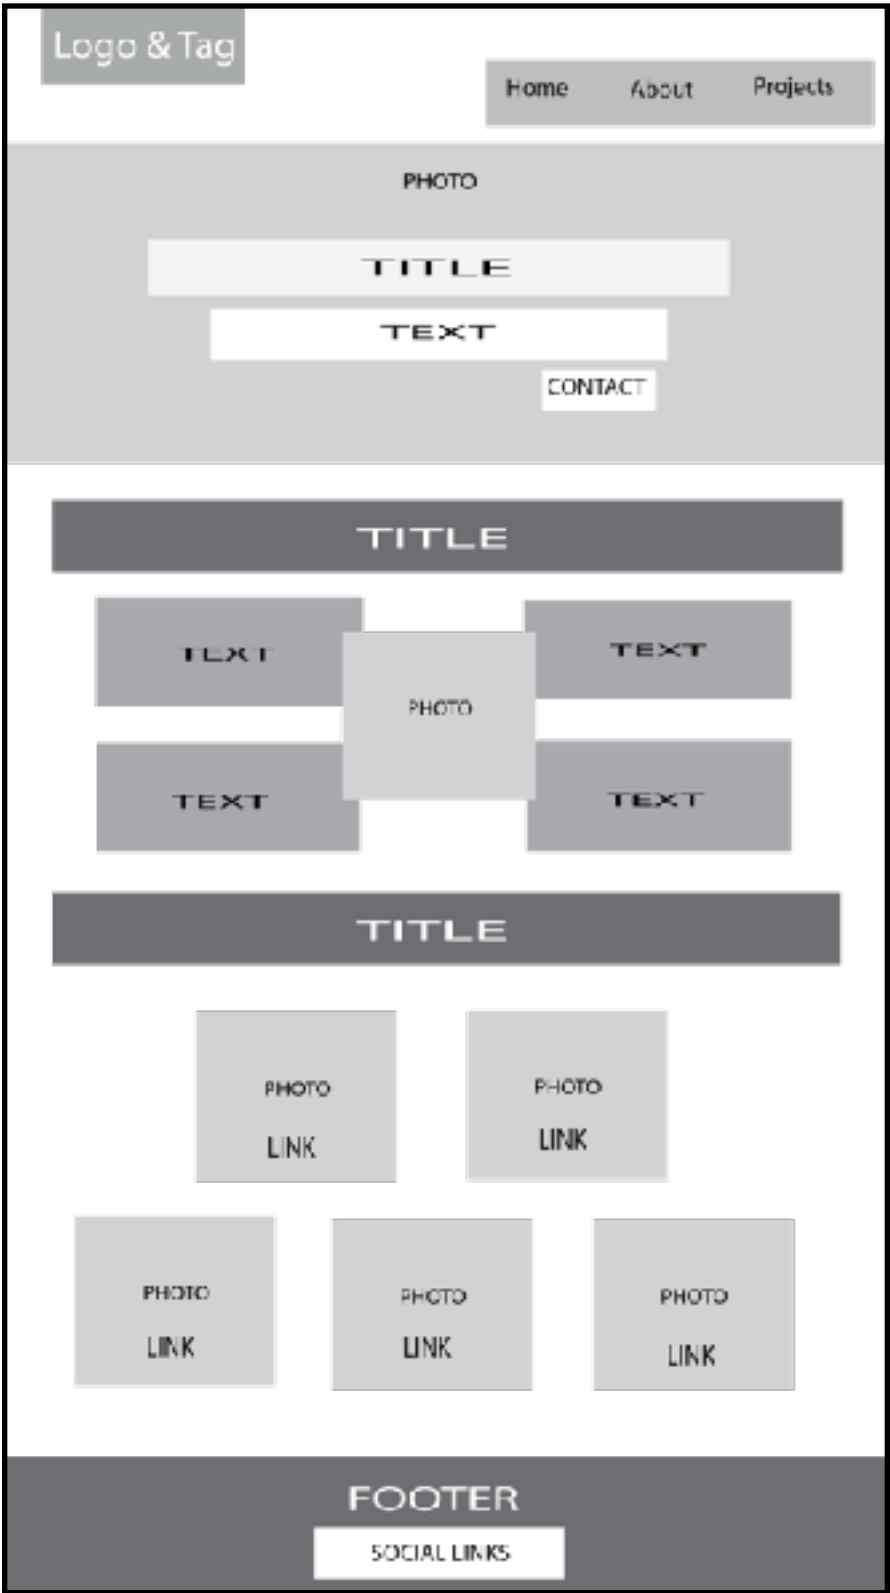

1. Linkedin
2. GitHub
3. Stack Overflow

Project Task List

Sever and Hosing
Graphics and Photos for website
Build html
Add Bootstrap
Logo and Brand and Headshot
